

UNIVERSITY *of* WASHINGTON

Has your child or loved one ever been hospitalized for experiences like hearing voices, or unusual and/or upsetting beliefs?

If so, we need your help!

Please share your experience and help design a program to help support families like yours.

The UW First Episode Psychosis team is developing a new program for families with a child or loved one who has experienced first episode psychosis and has been hospitalized.

We are gathering information from families in the community to determine what kinds of information, resources, and skills would have been helpful to them during hospitalization and during the transition from hospital to home.

We invite you to participate in a focus group with other families who have also experienced a hospitalization of a loved one with early symptoms of psychosis.

Join us for a 2-hour focus group* meeting

WHEN: Thursday, May 9th, 2019 from 5:30-7:30 p.m. *(a light dinner provided)*

WHERE: Passages Family Support, 1700 S. Assembly St., Spokane, WA

You will receive a \$30.00 for participating.

If interested, please call for a brief screening: Chris McCain at (206) 744-9473 or email cmccain@uw.edu.

Can't attend the focus group? Please call or email and we will send you a link to our survey. You will receive a \$15 Amazon gift card for completing the survey.

*This focus group will be co-led by UW faculty member and a parent with a loved one who has experienced psychosis.
